## **SPECTRUM MANAGEMENT SOFTWARE FIRMS CREATE PARTNERSHIP TO HELP SOLVE WIRELESS SPECTRUM SHORTAGE**

December 17, 2009, Washington, DC, USA / Lichtenau, Germany – International spectrum auction software developer KB Enterprises LLC and LS telcom AG, the world's leading vendor of spectrum management systems, announced today that they are joining forces to offer telecommunications regulators and network operators the most comprehensive software solutions for finding and assigning spectrum to telecommunications companies. Using the latest incumbent relocation and auctioning techniques, as well as cutting-edge analytical engineering tools, the partnership will expand LS telcom's already extensive spectrum management toolkit and help to break open a clogged spectrum market.

“With increasing demand for more and more spectrum for broadband access and mobile applications, it is critical that regulators not only be able to identify available spectrum, but also be able to assign it to those that value it the most in order to bring more competition to the marketplace and lower prices for consumers,” said Karen Wrege, founder and president of KB Enterprises. “Our new innovative auction software will help LS telcom lead the industry in bringing the benefits of the internet and wireless services to all consumers.”

“As the world's leading spectrum management software supplier, it is imperative that we have the tools to help regulators deal with the explosive demand in the market,” said Dr. Manfred Lebherz, president and CEO of LS telcom. “KB Enterprises is the right partner to help us revolutionize the industry for our clients.”

KB ENTERPRISES LLC provides telecommunications policy consulting, auction design, commercial software solutions, auction implementation, and bidding analysis services to regulators and network operators around the world. KB Enterprises LLC specializes in spectrum auction software solutions and has created a powerful platform that allows telecommunications regulators to choose from among all of the spectrum auction methods available to assign frequencies for internet and wireless services.
